

## Expanding Storyboard

How do we expand Storyboard feature to other departments of our product.

### **Storyboard Vision - one bad ass tool that allows users to collect, model, organize, collaborate and finally transact goods & services.**

- Collect Items on and off Platform
- Assemble, Compare, Model Collected Items
- Collaborate & Approve on Items
- Book, Purchase, Transact Items

### **Limitations of our current Storyboard.**

- Recent Activity** - Difficult to zero in on specific recent activity items in our Storyboard
- Storyboard Layout** - Intended to solve the problems of travel only
- Obtaining Content** - Make it easier to add content vs going through the booking path.
- Collaboration** - commenting could be optimized

### **One Storyboard to Rule Them All**

A single Storyboard that would collect everything.

#### **The Good:**

- Sometimes its nice to have everything located in 1 place.
- Task flow of adding content is reduce to 1 choice.

#### **The Bad:**

- UI overkill, each Storyboard content has its own unique UI commingling task flows and UI is very, very challenging, unsolvable corner cases will occur.
- Challenging to disable certain actions or feature via admin.
- Different transaction paths for different content.
- Collaboration & Approval models are slightly different.

### **A Silo Approach to Storyboard**

Silo Storyboards that would only collect specific type of items.

#### **The Good:**

- Specific UI to solve specific tasks.
- Less noise.
- Easy to turn off specific Storyboards from an admin point of view.
- Easier transact similar content

#### **The Bad:**

- Having to manage multiple types of Storyboards.
- Requires a more in-depth recent dashboard to navigate the breadth of activity

## Silo Approach

Two distinct storyboard apps.

### Silo Approach to expanding Storyboard.

#### The Idea

Make each Storyboard its own unique app, design it to do the job well, and work with the other suite of apps.

#### Travel Storyboard

Make one badass Storyboard that allows users to collect, model, collaborate and book travel.

Travel Items:

Flights, Cars, Rail, Buses, Hotels, and products.

#### Procurement Storyboard

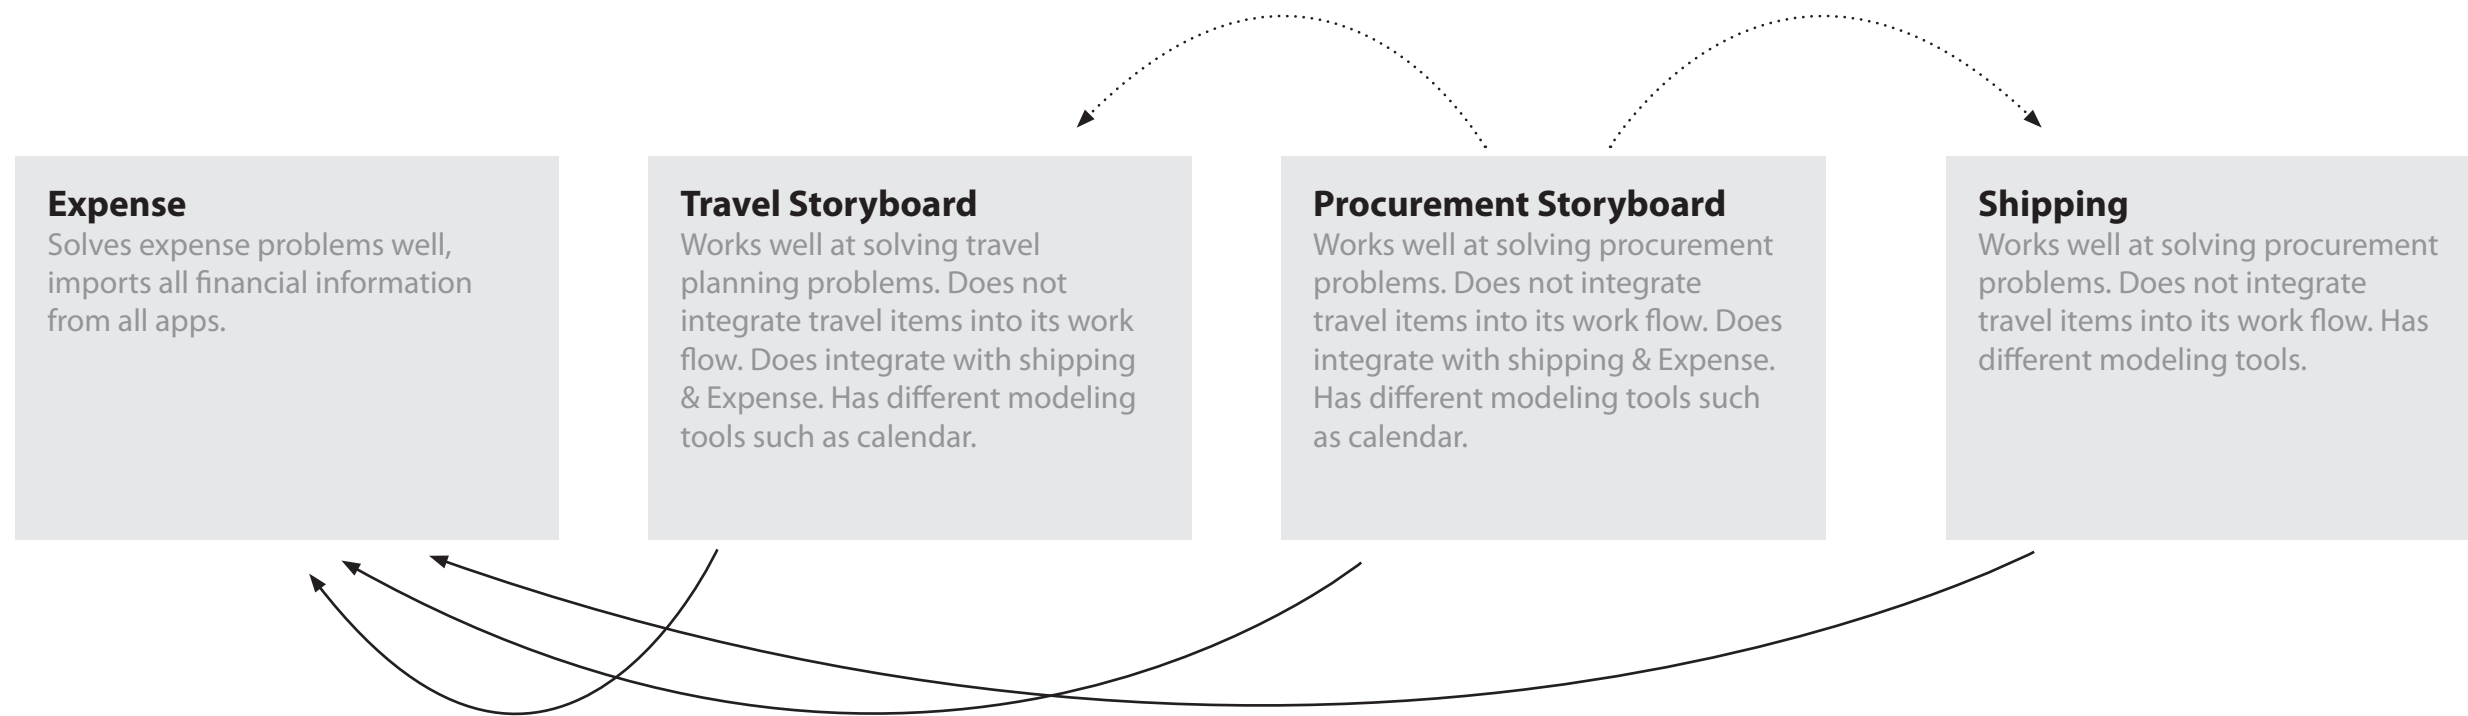

Make one badass Storyboard that allows users to collect, model, collaborate and purchase goods.

Items:

Products

### Suite of Independent Apps

Working well together, able to work independently & able to export

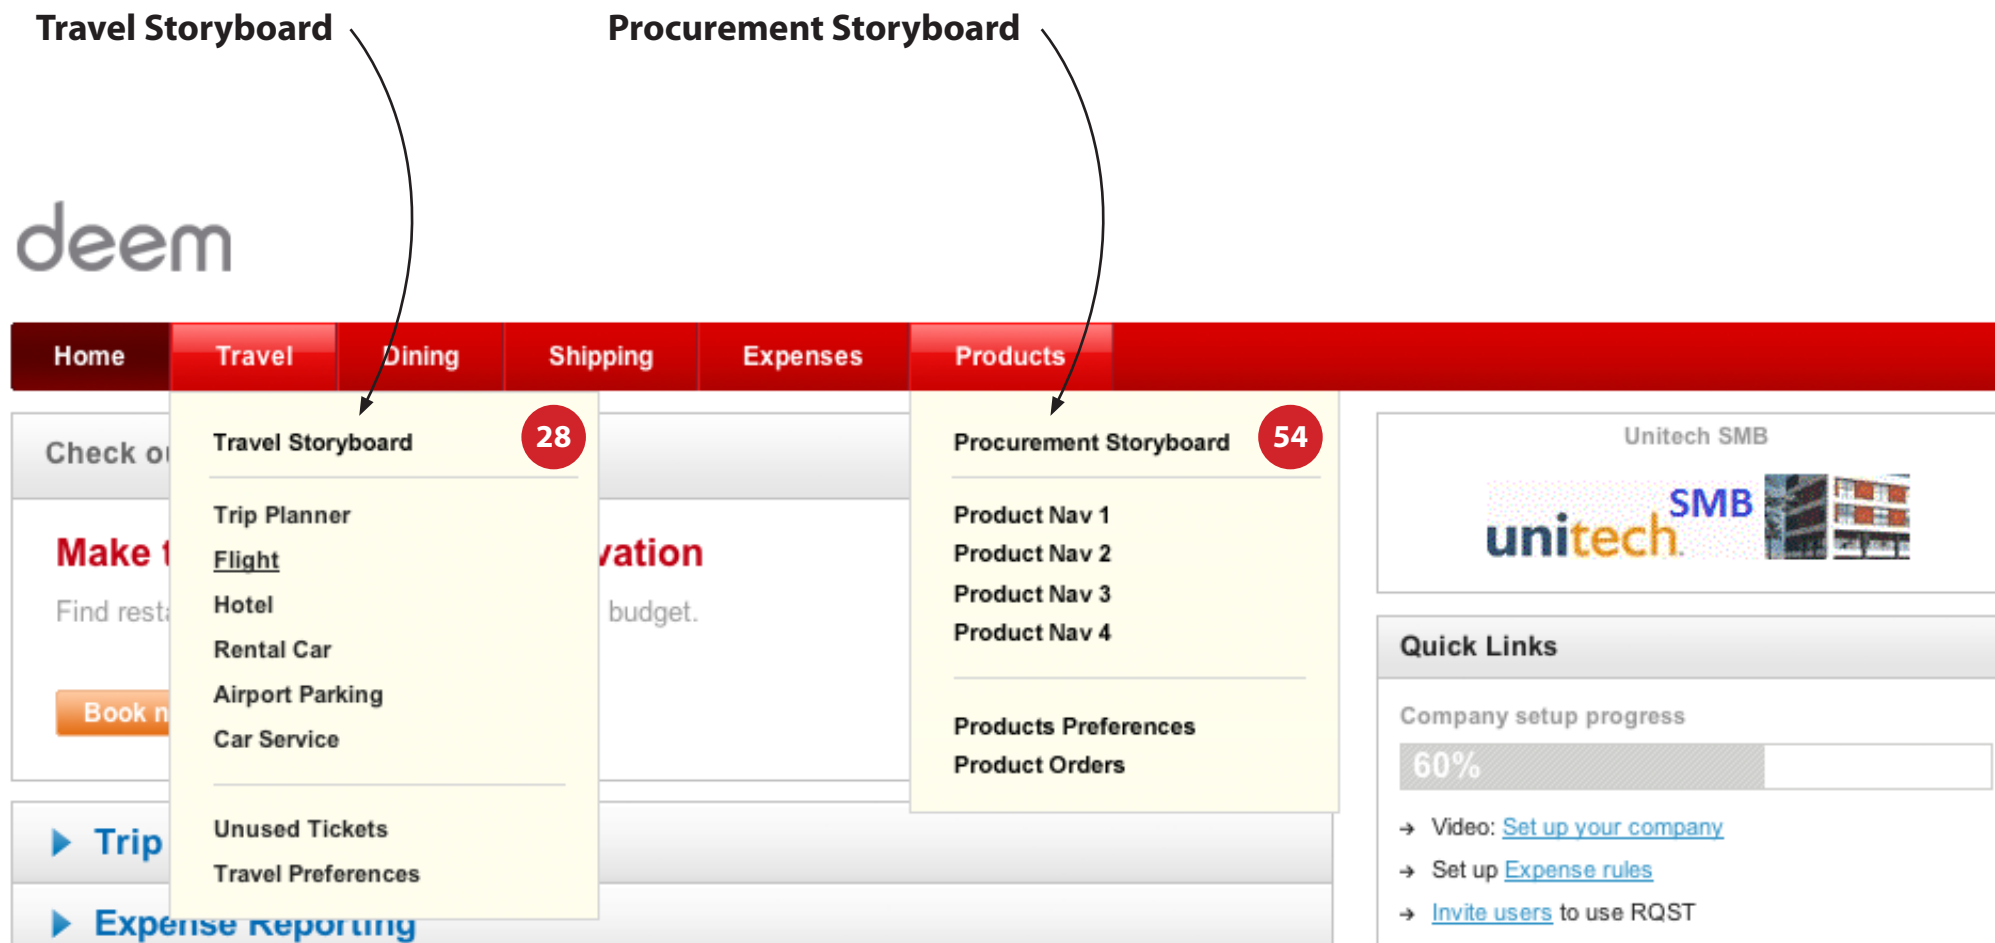

## Silo Approach

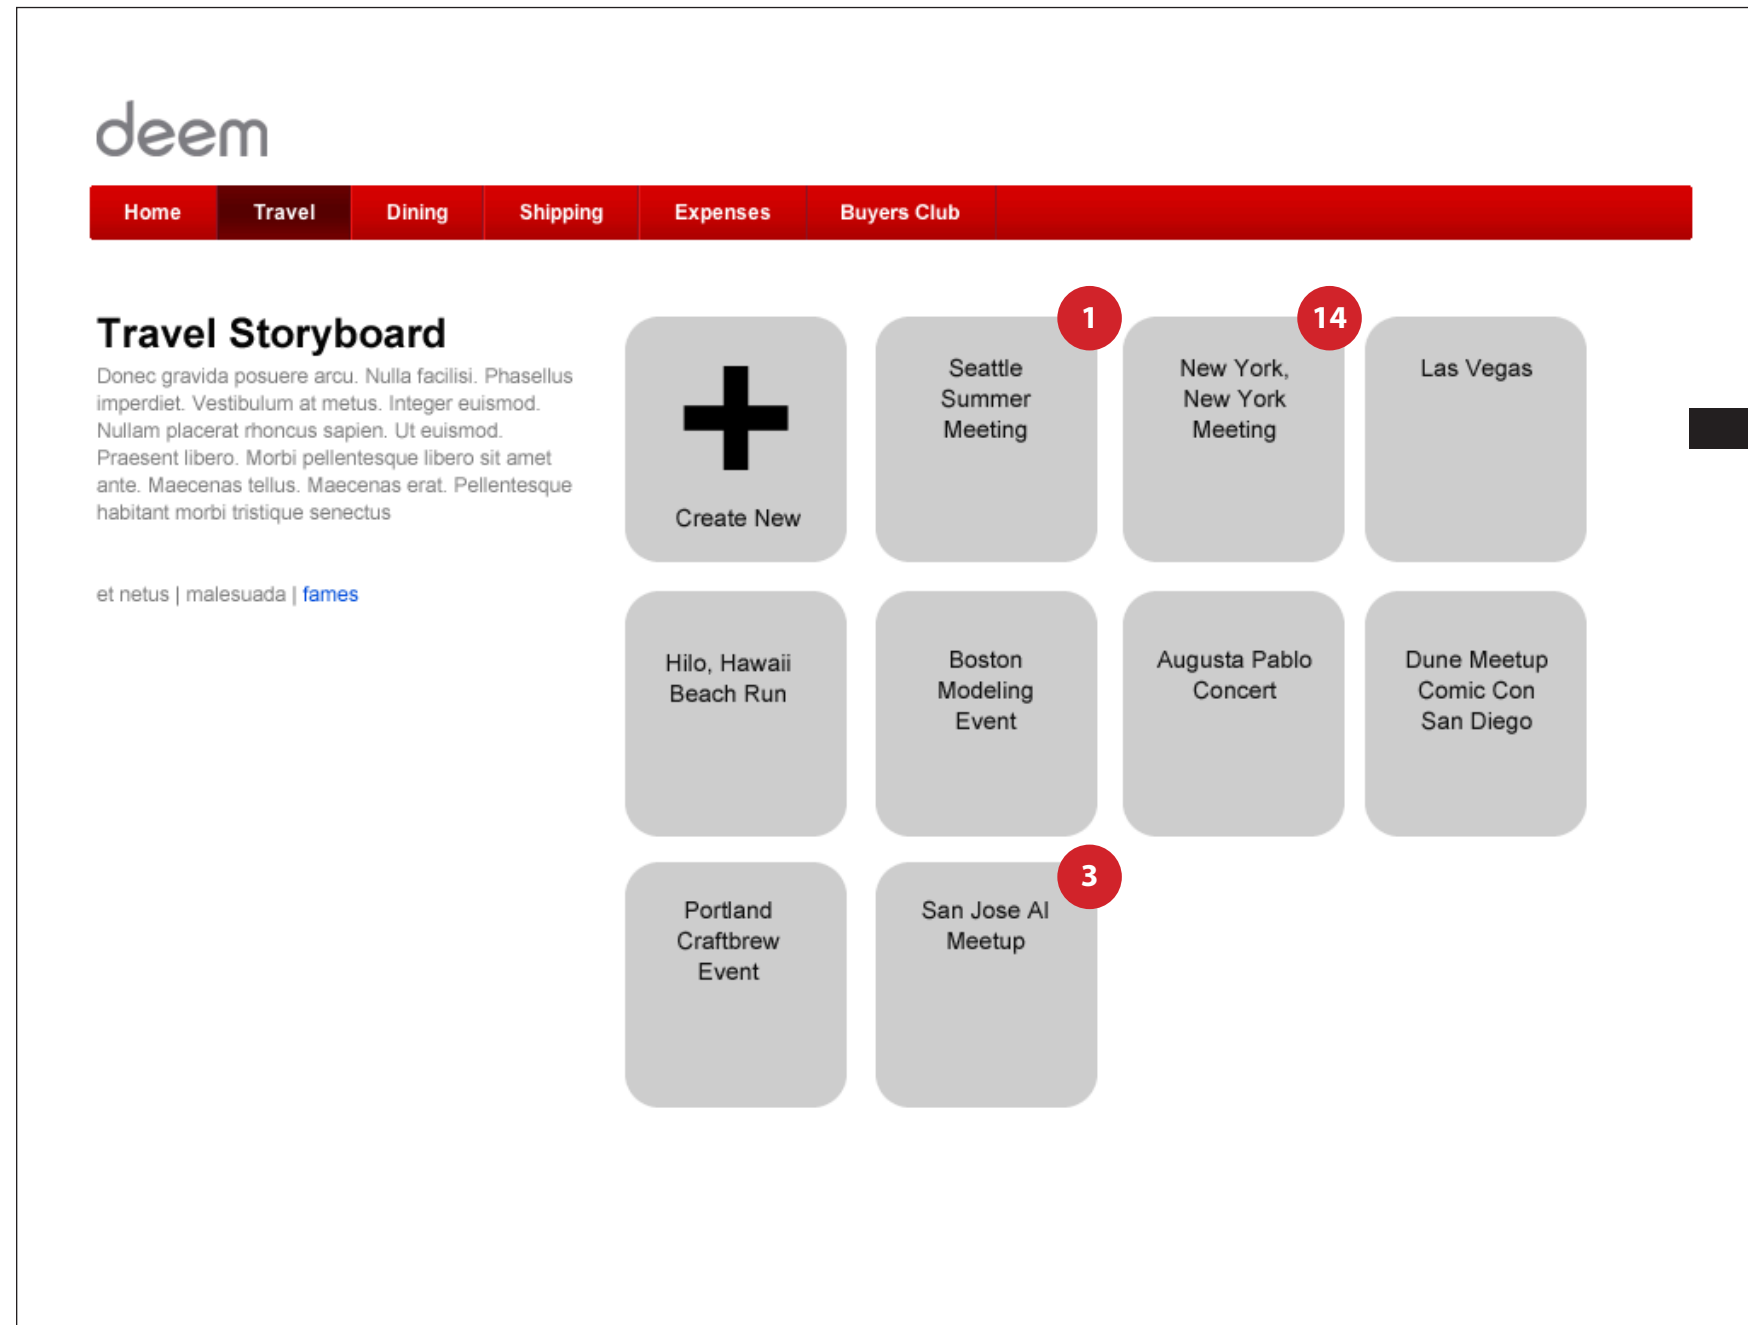

Two distinct storyboard apps.

### Silo Approach Layout

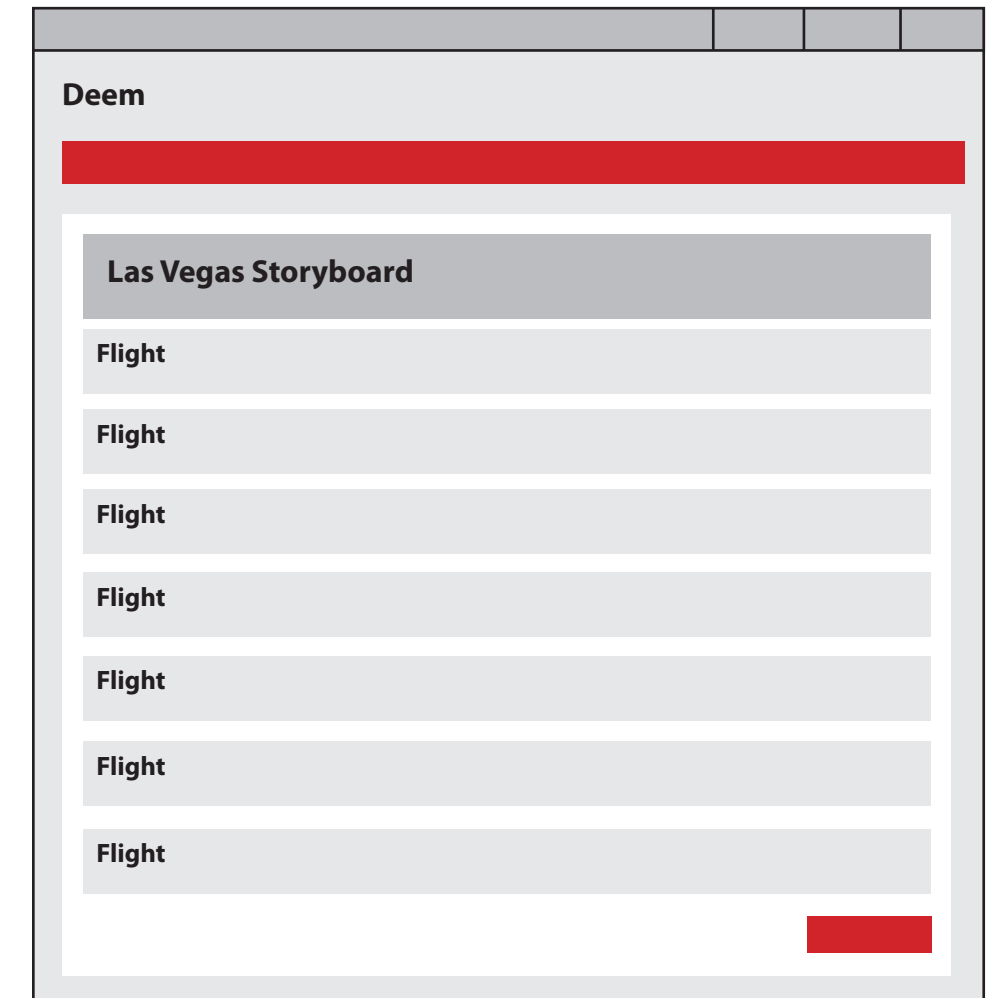

Place the apps in the specific buckets they belong to.

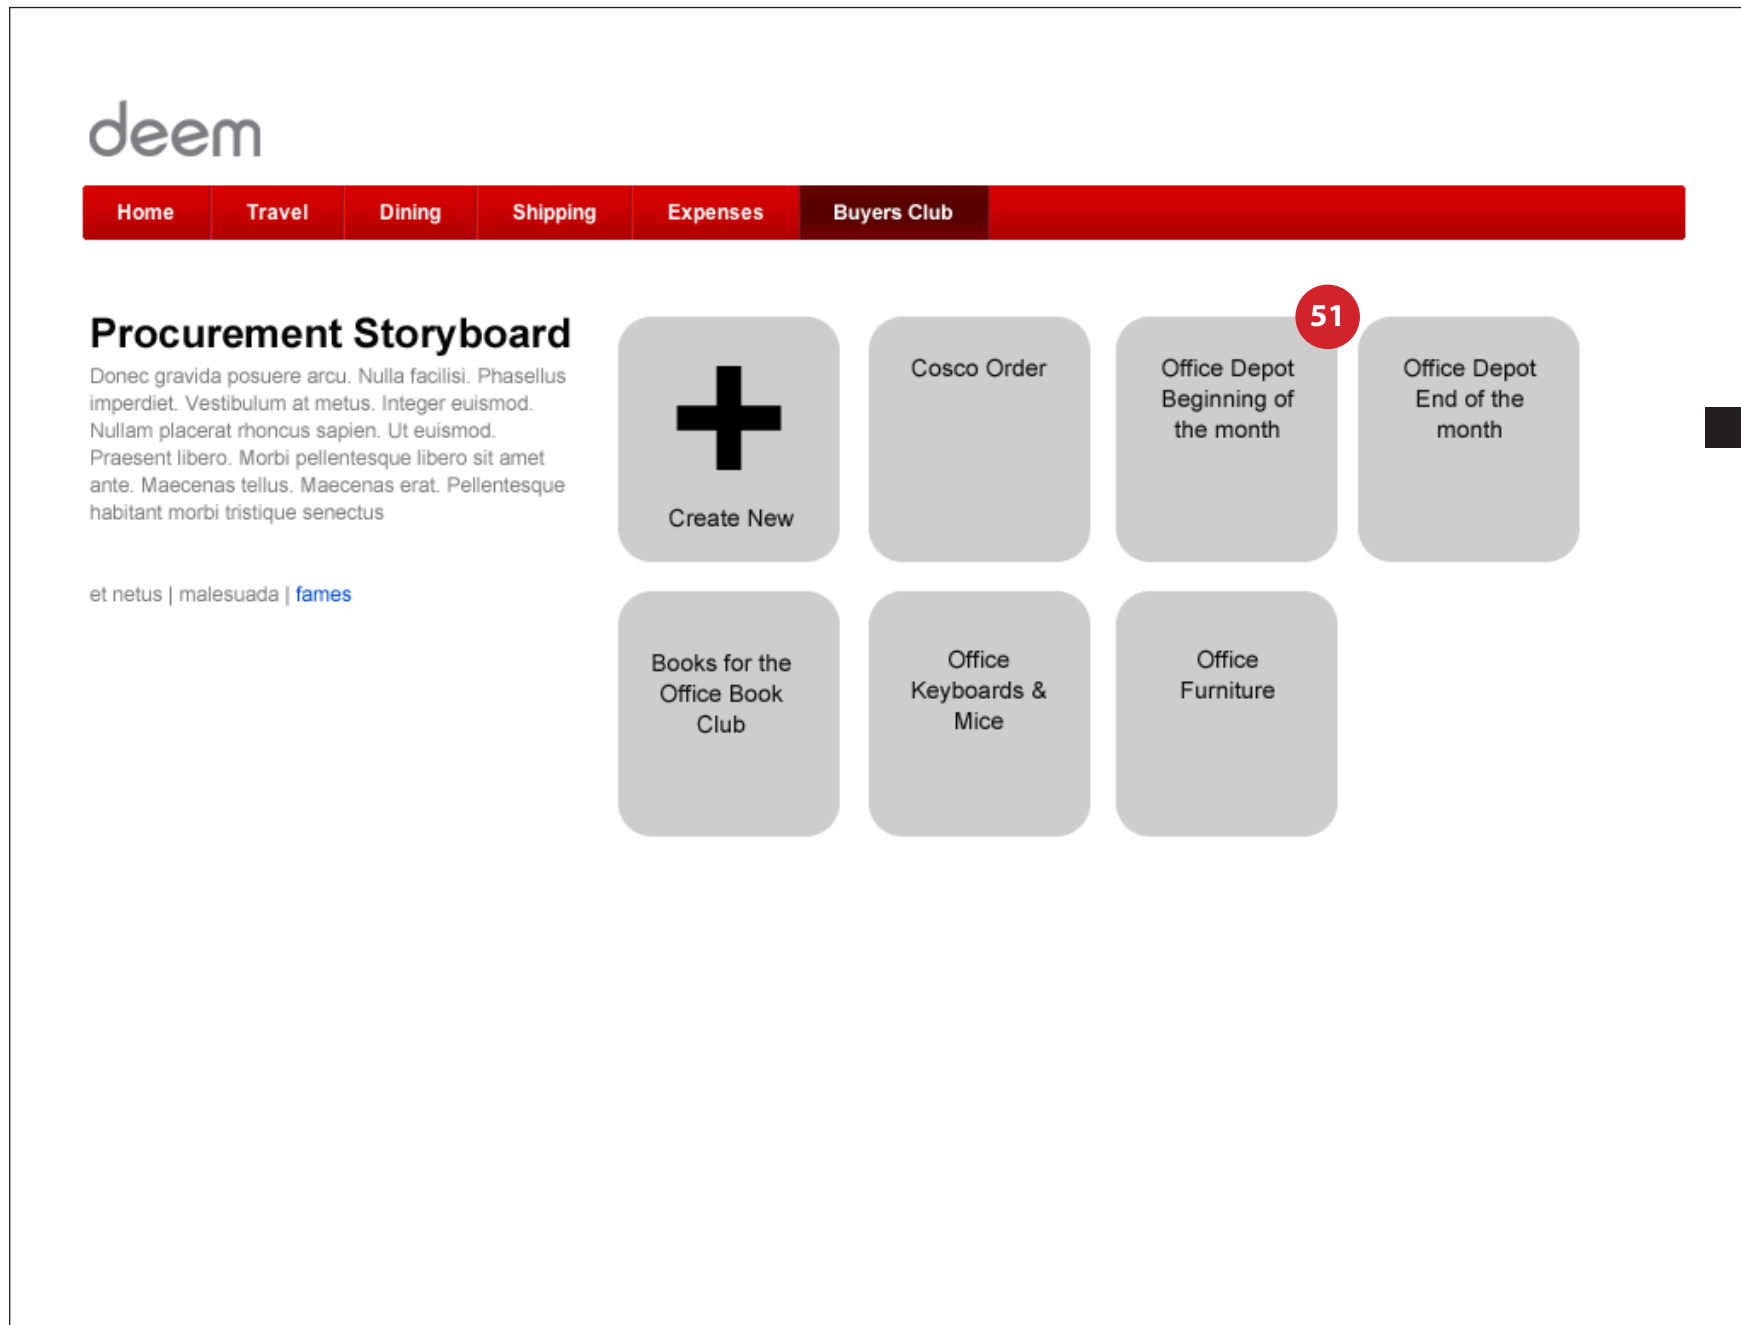

**Travel Storyboard Homepage**

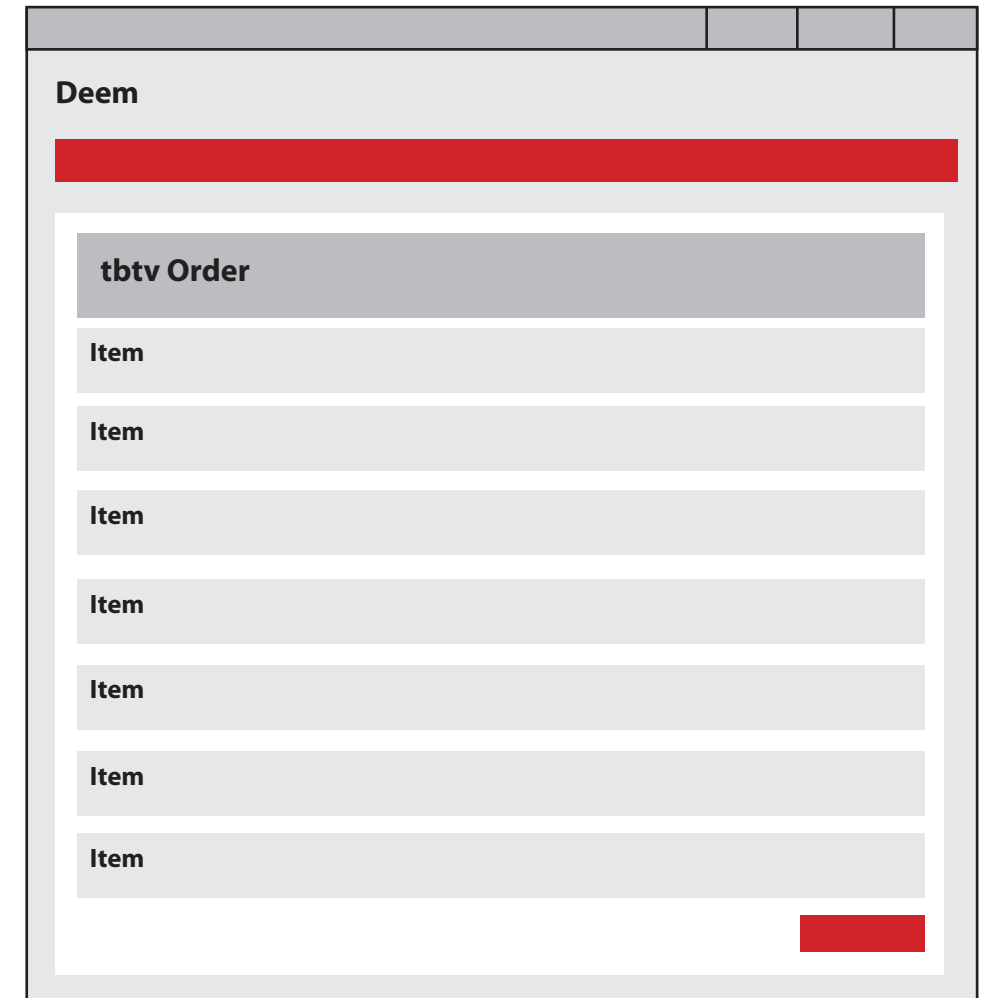

**Specific Travel Storyboard Page**

### Procurement Storyboard Homepage

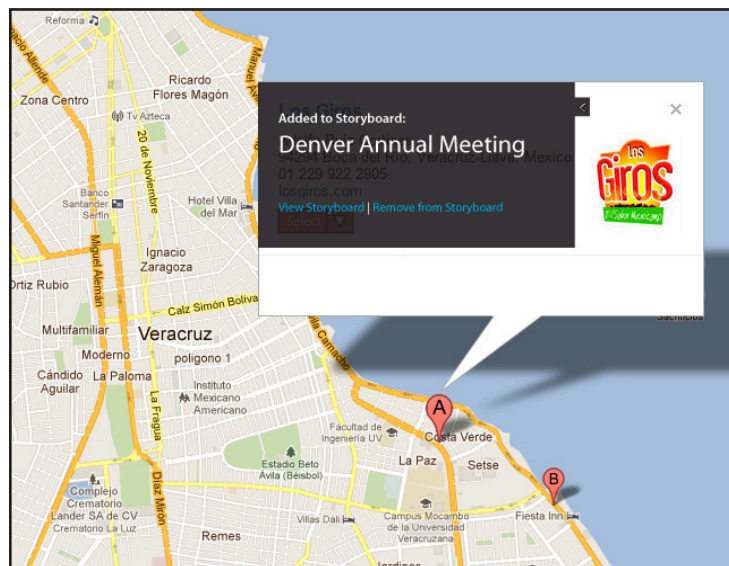

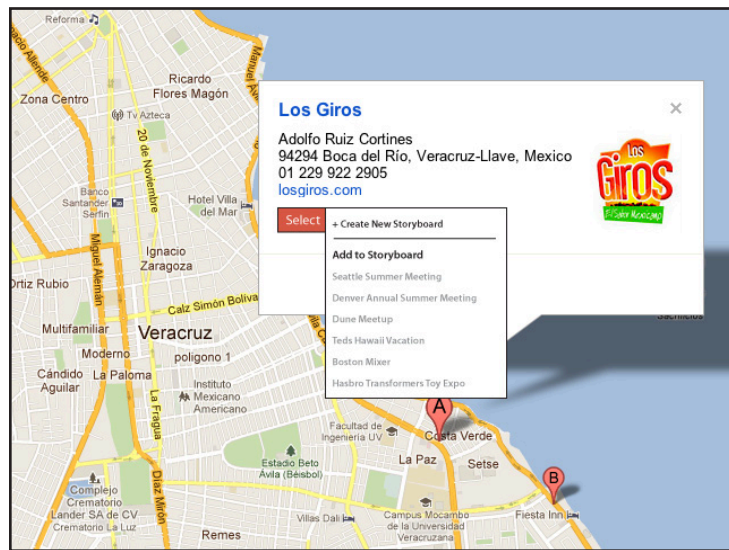

### Specific Procurement Storyboard Page

Growl Notifications

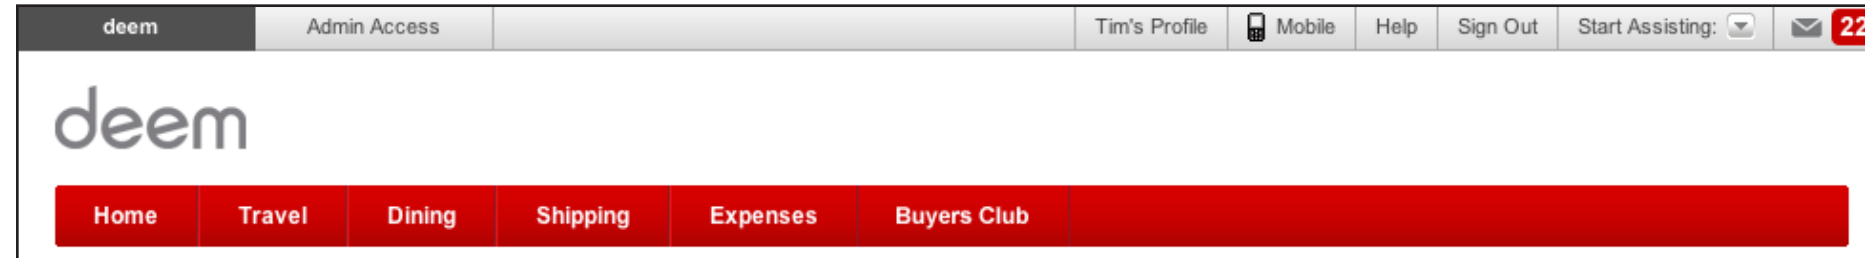

If we silo storyboards, how do we deal with the current growl notifications?

- Place Growl notification visually inline with task of collecting.
- Surface UI to view specific storyboard
- Surface UI to view storyboard home
- Confirm specific content has been added via drop down.

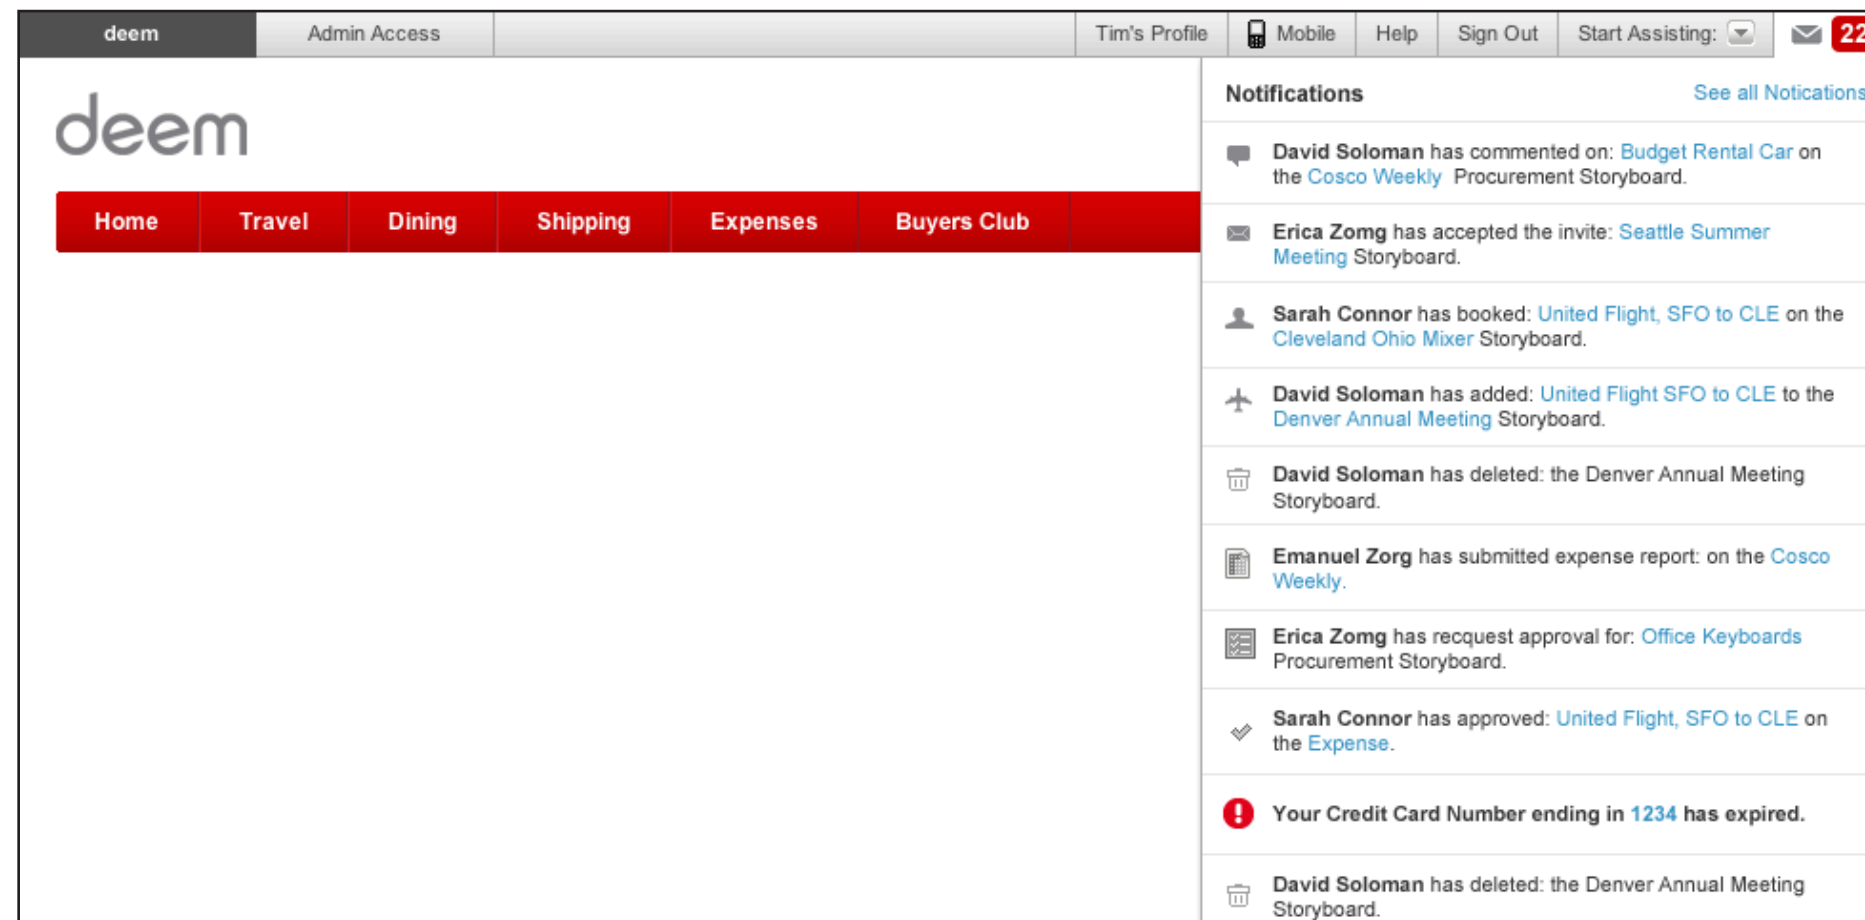

## A True Notification Inbox

Surface Clarity. All travel storyboards, procurement storyboards, price changes, invites accepted located in one location.

## Notification Drop Down

Showcase all recent activity, expenses, travel storyboards, invites, credit card expirations and etc.

## Notification Inbox Page

Central dumping ground of all recent activity, notifications, storyboard & expense actions
